

lights, the lighting projection device comprising:

- (i) a housing having multiple sides and a front, wherein the sides are adjacent one another;
- (ii) a frame for supporting the housing, the frame comprising lamp holding means for receiving and holding multiple par lamps;
- (iii) multiple par lamps supported in the lamp holding means; and
- (iv) means in the housing for supporting a primary diffusion element holder proximate the front of the housing, whereby when a primary diffusion element is disposed in the primary diffusion element holder, light diffusion will be provided for converting light from the par lamps directed thereat to a soft diffused projected light.--

25

~~24~~ 38.

37  
38. (New) The lighting device of claim 37, wherein the frame comprises a member

having a rectangular cross section with the par lamps disposed inside the rectangular member.--

26

~~22~~  
-39

39. (New) The lighting device of claim 38, wherein the par lamps each comprise a

collar fixed to the rectangular member and a par light disposed in the collar.--

28  
28

26  
26

2 ~~40~~. (New) The lighting device of claim ~~39~~, further comprising means for protecting a user from heat generated by the par lamps disposed on a side of the par lamps opposite to the front of the housing.--

29  
29

28  
28

2 ~~41~~. (New) The lighting device of claim ~~40~~, wherein the means for protecting comprises a cover.--

30  
30

29  
29

2 ~~42~~. (New) The lighting device of claim ~~41~~, wherein the cover has perforations.--

16  
16

16  
16

2 ~~43~~. (New) The lighting device of claim ~~37~~, wherein the frame has built-in par lamps disposed therein.--

17  
17

17  
17

16  
16

2 ~~44~~. (New) The lighting device of claim ~~43~~, wherein the par lamps are wired individually to a multiple pin connector for individual control of each of the par lamps.--

2  
2

1  
1

2 ~~45~~. (New) The lighting device of claim ~~37~~ wherein there are at least six par lamps mounted in the lamp holding means and positioned in rows and columns each having at least two par lamps.--

2  
2

1  
1

2 ~~46~~. (New) The lighting device of claim ~~37~~ further comprising means for connecting sides of the frame for folding with respect to each other so as to fold to a planar form.--

A

4  
~~47~~ (New) The lighting device of claim ~~37~~<sup>1</sup>, wherein the housing comprises a fabric material.--

5  
~~48~~ (New) The lighting device of claim ~~37~~<sup>1</sup>, wherein the housing comprises a duvatine skirt.--

6  
~~49~~ (New) The lighting device of claim ~~37~~<sup>1</sup>, wherein the primary diffusion element holder comprises a rigid rectangular member.--

21  
~~50~~ (New) The lighting device of claim ~~38~~<sup>25</sup>, wherein the means for supporting the primary diffusion element holder comprises one of rigid bars and chains connected to the frame.--

7  
~~51~~ (New) The lighting device of claim ~~37~~<sup>1</sup>, wherein the housing is enclosed at the sides at least from a position proximate the front of the par lamps to the front of the housing.--

21  
~~52~~ (New) The lighting device of claim ~~37~~<sup>1</sup>, further comprising a secondary diffusion element holder, wherein the secondary diffusion element holder is supported in the housing proximate the front such that, when diffusion elements are mounted in the primary diffusion element holder and the secondary diffusion element holder, light produced by the plurality of par lamps is directed therethrough. --

21

22  
--53

(New) The lighting device of claim 52, wherein a primary diffusion element is disposed in the primary diffusion element holder and a secondary diffusion element is disposed in the secondary diffusion element holder. --

18  
9  
--54

(New) The lighting device of claim 37, wherein a primary diffusion element is disposed in the primary diffusion element holder.--

8  
9  
--55

(New) The lighting device of claim 37, wherein the housing has an inner surface comprising a reflective material.--

9  
10  
--56

(New) The lighting device of claim 37, further comprising means attached to the frame for suspending the lighting device. --

10  
X  
--57

(New) The lighting device of claim 37, wherein the sides extend at least from the frame to the primary diffusion element holder. --

11  
X  
--58

(New) The lighting device of claim 37, wherein the sides enclose light from the par lamps such that the light only passes through the primary diffusion element holder. --

12  
X  
--59

(New) The lighting device of claim 37, further comprising means for providing access to said primary diffusion element holder for removing and replacing said primary diffusion element holder. --

13

~~13~~ 60. (New) The lighting device of claim ~~37~~<sup>1</sup>, further comprising means attached to the frame for suspending the lighting device. --

14

~~14~~ 61. (New) The lighting device of claim ~~37~~<sup>1</sup>, wherein the frame has four corners proximate a rear thereof, and further comprising means attached to the frame at four points proximate the four corners thereof, respectively, for hanging the lighting device.--

15

~~15~~ 62. (New) The lighting device of claim ~~37~~<sup>1</sup>, further comprising a yoke attached to the frame for pivotably holding the lighting device. -

37

~~37~~ 63. (New) A lighting device for lighting by front projection lighting a stage or set, the lighting device comprising:

a housing having multiple adjacent sides and a front;

a frame for mounting the housing and comprising lamp holding means for supporting multiple par lamps;

at least two diffusion element holders mounted in the housing spaced from one another and proximate the front of the housing and in front of the lamp holding means; and

multiple par lamps mounted in the lamp holding means to shine light through the diffusion element holders, whereby the multiple par lamps provide soft projected diffused light from the lighting device for lighting a stage or set when diffusion elements are provided in the diffusion element holders.--

53

37

2 ~~53~~. (New) The lighting device of claim ~~63~~, wherein the frame comprises a member  
having a rectangular cross section with the par lamps disposed inside the rectangular member.--

54

53

2 ~~54~~. (New) The lighting device of claim ~~64~~, wherein the par lamps each comprise a  
collar fixed to the rectangular member and a par light disposed in the collar.--

55

54

2 ~~55~~. (New) The lighting device of claim ~~65~~, further comprising means for protecting a  
user from heat generated by the par lamps disposed on a side of the par lamps opposite to the front  
of the housing.--

56

55

2 ~~56~~. (New) The lighting device of claim ~~66~~, wherein the means for protecting comprises  
a cover.--

57

56

2 ~~57~~. (New) The lighting device of claim ~~67~~, wherein the cover has perforations.--

58

37

2 ~~58~~. (New) The lighting device of claim ~~68~~, wherein the frame has built-in par lamps  
disposed therein.--

59

46

2 ~~59~~. (New) The lighting device of claim ~~69~~, wherein the par lamps are wired  
individually to a multiple pin connector for individual control of each of the par lamps.--

~~32~~ 11. (New) The lighting device of claim ~~63~~<sup>37</sup>, wherein there are at least six par lamps  
2 mounted in the lamp holding means and positioned in rows and columns each having at least two  
par lamps.--

~~32~~ 12. (New) The lighting device of claim ~~63~~<sup>37</sup> further comprising means for connecting  
2 sides of the frame for folding with respect to each other so as to fold to a planar form.--

~~34~~ 13. (New) The lighting device of claim ~~63~~<sup>37</sup>, wherein the housing comprises a fabric  
2 material.--

~~35~~ 14. (New) The lighting device of claim ~~63~~<sup>37</sup>, wherein the housing comprises a duvatine  
2 skirt.--

~~36~~ 15. (New) The lighting device of claim ~~63~~<sup>37</sup>, wherein the primary diffusion element  
2 holder comprises a rigid rectangular member.--

~~38~~ 16. (New) The lighting device of claim ~~63~~<sup>37</sup>, further comprising means for supporting the  
2 diffusion element holders on the frame.--

~~42~~ 17. (New) The lighting device of claim ~~76~~<sup>48</sup>, wherein the means for supporting the  
2 diffusion element holders comprises one of rigid bars and chains connected to the frame.--

37

37

~~78~~. (New) The lighting device of claim ~~63~~, wherein the housing is enclosed at the sides  
at least from a position proximate the front of the par lamps to the front of the housing.--

50

37

~~79~~. (New) The lighting device of claim ~~63~~, wherein a primary diffusion element is  
disposed in one of the diffusion element holders and a secondary diffusion element is disposed in  
the other of the diffusion element holders. --

38

37

~~80~~. (New) The lighting device of claim ~~63~~, wherein the housing has an inner surface  
comprising a reflective material.--

39

37

~~81~~. (New) The lighting device of claim ~~63~~, further comprising means attached to the  
frame for suspending the lighting device. --

40

37

~~82~~. (New) The lighting device of claim ~~63~~, wherein the sides extend at least from the  
frame to the primary diffusion element holder. --

41

37

~~83~~. (New) The lighting device of claim ~~63~~, wherein the sides enclose light from the par  
lamps such that the light only passes through the diffusion element holders. --

42

37

~~84~~. (New) The lighting device of claim ~~63~~, further comprising means for providing  
access to the diffusion element holders for removing and replacing the diffusion element holders.--

32  
43  
85. (New) The lighting device of claim 63, further comprising means attached to the  
2 frame for suspending the lighting device. --

44  
86. (New) The lighting device of claim 63, wherein the frame has four corners  
proximate a rear thereof, and further comprising means attached to the frame at four points  
proximate the four corners thereof, respectively, for hanging the lighting device. -

45  
87. (New) The lighting device of claim 63, further comprising a yoke attached to the  
2 frame for pivotably holding the lighting device. -

58  
88. (New) A method of lighting a stage or set using at least one lighting device, wherein  
2 the lighting device comprises a housing a contiguous closed portion and a front, and means for  
mounting at least four par lamps, the method comprising the steps of:

- 4 (i) providing a diffusion frame with a diffusion element proximate the front of the  
housing;
- 6 (ii) providing a frame for holding the at least four par lamps therein and for supporting  
the housing;
- 8 (iii) positioning the frame with the at least four par lamps proximate a rear of the  
housing directed towards the diffusion element at the front of the housing, with the  
10 housing being enclosed at least from the par lamps to the diffusion element;
- 12 (iv) diffusing light from each of the at least four par lamps using the diffusion element;  
and

- (v) using the diffused light exiting the diffusion element to illuminate at least part of a stage or set.--

59  
58  
-89. (New) The method of claim 88, further comprising a step of using lighting devices as a primary means of lighting a set.--

60  
59  
-90. (New) The method of claim 88, further comprising a step of positioning the lighting device at a front of the set to illuminate the set from the front.--

61  
59  
-91. (New) A lighting device for directing and controlling light from at least four nonfocusable par lamps, the lighting device comprising:

a housing having four sides, a front and a back;

at least four par lamps;

a rigid member for mounting the par lamps in the housing, and for mounting the housing;

primary means for diffusing light from the multiple par lamps, the primary means for diffusing disposed proximate the front of the housing for forming a soft, projected and diffused light from the par lamps when disposed in the housing and directed at the primary means for diffusing.--

60  
61  
-92. (New) The lighting device of claim 91, wherein the frame comprises a member having a rectangular cross section with the par lamps disposed inside the rectangular member.--

81/8  
81/8

80

2 93. (New) The lighting device of claim 92, wherein the par lamps each comprise a collar fixed to the rectangular member and a par light disposed in the collar.--

82

81

94. (New) The lighting device of claim 93, further comprising means for protecting a user from heat generated by the par lamps disposed on a side of the par lamps opposite to the front of the housing.--

83

83

2 95. (New) The lighting device of claim 94, wherein the means for protecting comprises a cover.--

84/8

83

96. (New) The lighting device of claim 95, wherein the cover has perforations.--

76/8

61/8

2 97. (New) The lighting device of claim 91, wherein the frame has built-in par lamps disposed therein.--

77/8

76/8

2 98. (New) The lighting device of claim 97, wherein the par lamps are wired individually to a multiple pin connector for individual control of each of the par lamps.--

62

61/8

2 99. (New) The lighting device of claim 91, wherein there are at least six par lamps mounted in the lamp holding means and positioned in rows and columns each having at least two par lamps.--

63

61  
42

--100. (New) The lighting device of claim 91, further comprising means for connecting

sides of the frame for folding with respect to each other so as to fold to a planar form.--

64

61
